this book is the first to offer a systematic methodology for solving nonlinear ordinary differential equations via power series specifically those arising in mathematical physics it provides tools to eliminate the tedious manipulation of infinite series enabling recursive computation of all terms the authors also present a structured approach to overcoming convergence issues inherent to such methods demonstrating that power series solutions can be both accessible and practical the authors teaching philosophy that mathematics is best learned by doing is reflected throughout with the text largely composed of idea driven examples and physically motivated problems from their own research proofs are included only when necessary for readers to construct custom theorems or definitions relevant to real world applications ultimately the book shows that power series methods can effectively complement numerical techniques offering applied mathematicians a powerful and versatile toolset this book is intended for researchers engaged in applied mathematics and is structured so it can be used in a one semester advanced undergraduate or graduate course necessary course prerequisites are a knowledge of differential equations analytical and numerical methods linear algebra and complex variables

this student solutions manual contains solutions to odd numbered exercises in the fourth edition of mathematics for economics

contains fully worked out solutions to all of the odd numbered exercises in the text giving students a way to check their answers and ensure that they took the correct steps to arrive at an answer
